With the advent of electronic gadgets, we increasingly see time displayed everywhere in digital format. But learning to tell time using an analog clock is an essential skill for kids that can help build their cognitive abilities and sensory motor skills. Being able to tell time requires basic calculations and counting skills that not only helps kids with math but also helps them being organized and being able to track progress on their day to day activities. This workbook is written keeping in mind that teaching kids to be able to read analog clocks and tell time is a challenging task and with regular and consistent practice they would gain a skill that would be endlessly rewarding. Being able to read clocks can help kids make informed decisions whether they are late or if they have plenty of time. It's widely observed that kids who can read clocks can get ready for school in time. It also tells them when it's time for lunch and alert them when their favorite TV show is about to come on. Learning how to tell time can also be great fun when you use games, activities, and exercises to practice reading, writing, and setting clock times. Once you've learned how to read a clock, you can put your skills to many good uses. Above all, being able to read clocks and tell time makes kids feel more confident and smart. addition sums with two addends. The addends are of 4 digit each. This book has more than 3100 subtraction facts for daily practice by students. Each page has 2 different sets consisting of 18 problems each. It is recommended for students to attempt 1 set daily for consistent practice. Book starts with addition strategies to help students grasp basic concepts and get started. Once students start gaining confidence in individual facts, they can review their knowledge by solving mixed facts. Book can be used to track practice time for each set. Date and time can be recorded at top of each page. Answer to each problem is given at the end of the book. Knowing subtraction facts is helpful not only in academics; we frequently use subtraction in our daily lives too. Just like learning to walk before you can run, learning subtraction and familiarizing yourself with numbers are building blocks for other math topics taught in school. Mastering the basic math facts develops automaticity in kids. Automaticity is the ability to do things without occupying the mind with the low level details that are required; this is usually the result of consistent learning, repetition, and practice. For instance, an experienced cyclist does not have to concentrate on turning the pedals, balancing, and holding on to the handlebars. Instead, those processes are automatic and the cyclist can concentrate on watching the road, the traffic, and other surroundings. Until students have developed sufficient sensory-cognitive tools supporting access to symbolic memory, they will not be able to image, store or retrieve all of the basic facts with automaticity. Therefore, students need a comprehensive, developmental, and multi-sensory structured system for developing automaticity with the facts.
